SUMMARY

Software Engineer with 2+ years of total experience building backend services and production AI systems on Azure and Kubernetes. Worked on AI automation, API platforms, and event-driven architectures used in real-world environments. Hands-on experience in FastAPI, Kubernetes, and Generative AI systems (LLM-based applications), with deep technical ownership over end-to-end systems.

WORK EXPERIENCE

Junior Software Engineer

Jul 2024 - Present

Anunta Technology

- **DesktopReady (DaaS) Infrastructure:** Engineered backend microservices for an Azure-based Desktop-as-a-Service platform, automating VM lifecycle management, user assignment, and Active Directory synchronization using **FastAPI**, **SQLAlchemy**, and **Pydantic**.
- **Event-Driven Architecture:** Architected asynchronous communication patterns with **RabbitMQ**, reducing inter-service latency by 25% and achieving high-availability messaging across services
- **Incident Resolver (AI Ops):** Developed an internal **AI automation** platform (AutoGen + RAG) that autonomously triages production incidents, resulting in a 40% reduction in manual engineering intervention
- **Cloud Orchestration:** Owned the deployment and scaling of containerized services via **Docker and Kubernetes**, optimizing resource utilization and improving overall system uptime

Software Engineer Intern

Jan 2024 - Jul 2024

Xendworks

- Developed **Flutter** application with modular architecture, supporting 1,000+ active users and 20% engagement growth.
- Enterprise API Engineering: Built secure **RESTful APIs** featuring **OAuth** authentication and Role-Based Access Control (RBAC) to manage sensitive data modules

TECHNICAL SKILLS

Languages: Python (Pandas, NumPy, PyTorch, FastMCP (Model Context Protocol)), Go, SQL, JavaScript

Backend & Systems: FastAPI, Microservices, Elasticsearch, RabbitMQ, API Development, System Design

Cloud/DevOps: Docker, Kubernetes, Azure, CI/CD, Jenkins, Git, Monitoring (Grafana)

AI / ML: LangChain, LangGraph, AutoGen, RAG, KAG, Fine-tuning (LoRA), Prompt Engineering, Guardrails, K-means, scikit-learn

Databases: PostgreSQL, MySQL, Redis, ChromaDB

PROJECTS

[Aegis | Centralized Gateway & Governance Platform](#)

- Architected an AI gateway to manage security, routing, and cost for LLM deployments. Engineered a high-performance pipeline featuring **PII masking (Presidio)** and an **Open Policy Agent (OPA)** engine for token budget enforcement. Implemented a hybrid semantic cache using **RedisVL**, reducing API costs by 30% and integrated a **Knowledge-Augmented Generation (KAG)** layer with **Neo4j** for complex entity reasoning.
- **Tech Stack:** FastAPI, Kubernetes, RedisVL, Neo4j, Qdrant, Presidio, OPA, LangChain, PostgreSQL.

[FlowState | Autonomous Multi-Agent Orchestration](#)

- Designed DAG-based workflow engine handling parallel agent execution with retry and rollback mechanisms. Developed custom **Human-in-the-Loop (HITL)** oversight modules to ensure 100% compliance with healthcare safety standards while automating 80% of manual verification tasks.
- **Tech Stack:** LangGraph, LangChain, FastAPI, Multi-Agent Systems, Python, LLM Orchestration, Vue.js.

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate | Microsoft

2025

EDUCATION

KCG College of Technology | Chennai

2021 - 2025

B.Tech in Information Technology
